Abstract of DE10142796

The front section (11) of a vehicle has a lateral bumper carrier (12) mounted to at least one part of the bodywork, with an impact damper (15) to absorb impact energy between the bumper carrier and the bodywork. The impact damper has a holder (16) in one piece with it, for at least one vehicle function module and especially a radiator for the motor coolant. The holder has a base section (19) extending vertically downwards, and a support section (21) for the radiator extending horizontally at the bottom of it.
